Pathogen Genomics Surveillance

TX SARS-CoV-2 Variant Surveillance Network

Saroj Rai, PhD, MPH

Senior Scientific Advisor

Office of the Chief State Epidemiologist

Texas Department of State Health Services

October 30, 2023

The Texas SARS-CoV-2 Variant Network Project is funded and supported by the Texas Department of State Health Services (DSHS) as part of a financial assistance award from the Centers for Disease Control and Prevention (CDC) of the U.S. Department of Health and Human Services (HHS) totaling \$15 million, with 100 percent funded by CDC/HHS. The contents are those of the author(s) and do not necessarily represent the official views of, nor an endorsement by, DSHS, CDC/HHS, or the U.S. Government.

DISCLAIMER

The information presented today is based on current preliminary data and on CDC's recent guidance. Information is subject to change.

Texas SARS-CoV-2 Variant Surveillance Network Project

TEXAS

Health and Human Services

Texas Department of State
Health Services

- The Texas Department of State Health Services (DSHS), in partnership with The University of Texas Health Science Center at Houston School of Public Health (UTHealth SPH), has created a statewide SARS-CoV-2 variant surveillance monitoring network (Network).
- The Network is comprised of:
 - 8 Academic institutions
 - 1 Hospital System
 - 2 Commercial labs
 - 1 Public health lab
- Short-term goal: Increase SARS-CoV-2 sequencing capacity and analysis in Texas for electronic reporting of the data to DSHS.
- Long-term goals:
 - Establish the infrastructure & capacity for genomic surveillance and epidemiology with a statewide reach and local impact that could be applied to other emerging infectious disease pathogens.
 - Identify skills and develop training to build a pipeline of trained public health professionals to cover current workforce gaps & meet future public health needs.
- Initiated on 9/30/2021

Network Project Findings

Texas SARS-CoV-2 Whole Genome Sequencing by Sample Collection Week (9/30/2021 - 09/30/2023)

Data are preliminary

SARS-CoV-2 Positive Samples Sequenced by the Network Labs by Texas County (9/30/2021 – 9/30/2023)

Texas SARS-CoV-2 Whole Genome Sequencing by Sample Collection Week, by Reporting Lab (01/01/2023 - 09/30/2023)

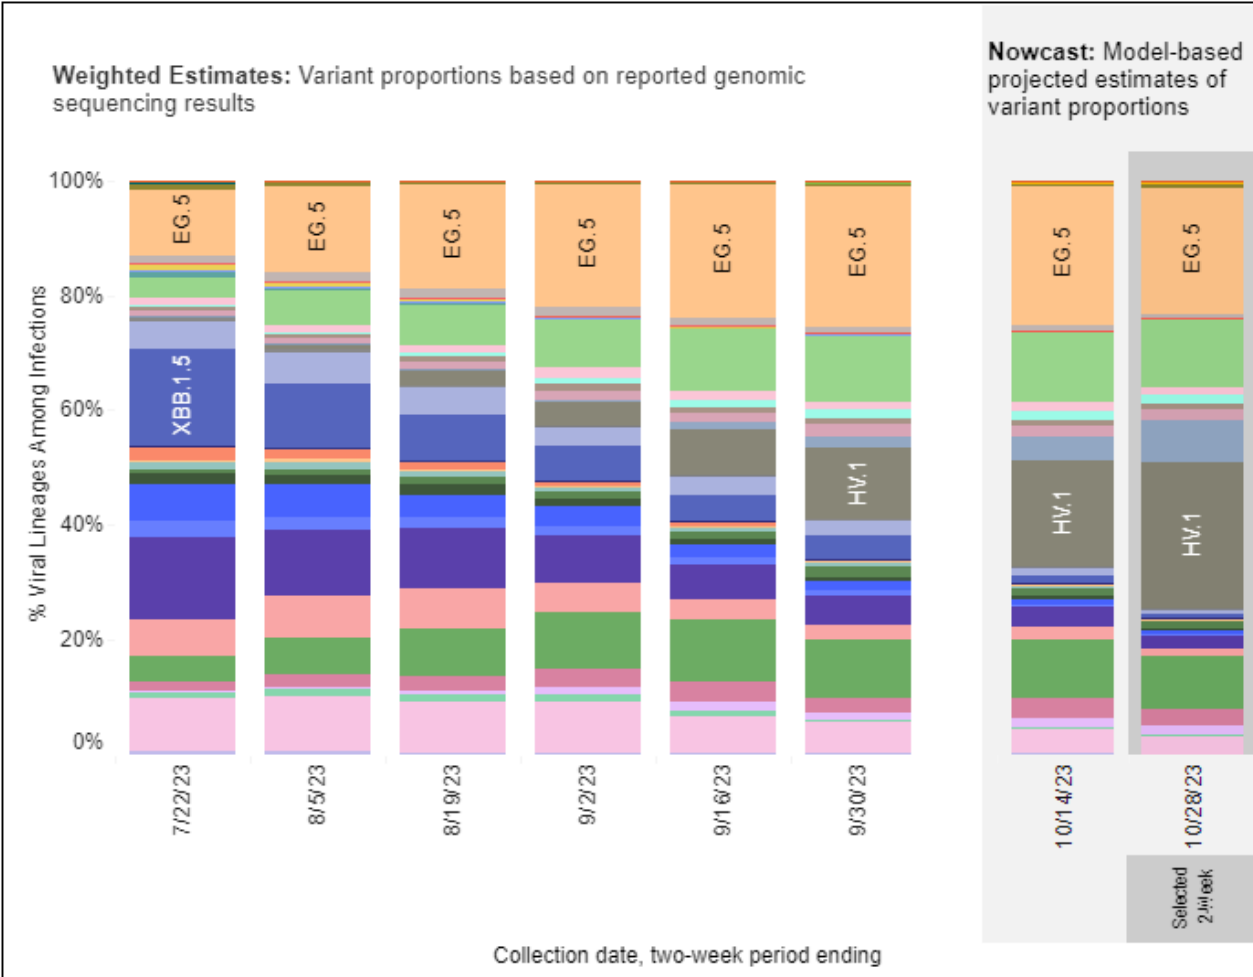

Data are preliminary

SARS-CoV-2 Variant Proportions – U.S.

Weighted and Nowcast Estimates in United States for 2-Week Periods in 7/9/2023 – 10/28/2023

Hover over (or tap in mobile) any lineage of interest to see the amount of uncertainty in that lineage's estimate.

Nowcast Estimates in United States for 10/15/2023 – 10/28/2023

USA			
WHO label	Lineage #	% Total	95%PI
Omicron	HV.1	25.2%	22.7-27.9%
	EG.5	21.9%	19.6-24.3%
	FL.1.5.1	12.0%	9.8-14.6%
	XBB.1.16.6	9.2%	8.0-10.5%
	HK.3	7.5%	5.6-9.9%
	XBB.1.16.11	3.1%	2.4-4.0%
	XBB.2.3	3.0%	2.5-3.6%
	XBB.1.16	2.2%	1.8-2.7%
	HF.1	1.8%	1.1-3.0%

SARS-CoV-2 Variant Proportions - Texas

Source: <https://www.dshs.texas.gov/covid-19-coronavirus-disease/sars-cov-2-variants-and-genomic-surveillance-Texas>, accessed 10/27/2023

SARS-CoV-2 Lineages

Updated 2023-2024
COVID-19 Vaccines include
Omicron variant XBB.1.5

SARS-CoV-2 Variant BA.2.86

- BA.2.86 is a newly designated variant of SARS-CoV-2 that has several additional mutations compared with previously detected Omicron variants.
 - Closely related to BA.2, the dominant Omicron lineage in early 2022.
 - Over 30 amino acid changes in the Spike region compared with the more recently circulating XBB.1.5.
 - This number of genetic differences is roughly of the same magnitude as seen between the initial Omicron variant (BA.1) and previous variants, such as Delta (B.1.617.2).
- As of October 23, 2023, the Centers for Disease Control and Prevention reported detection of the variant in 32 countries, including the United States.
- As of October 25, 2023, one case of BA.2.86 has been detected in Texas Public Health Region 6/5S in August, but the case was a Maryland resident.

Network Project Overall Accomplishments

Overall Network Accomplishments

- Increased the infrastructure and capacity for genomic surveillance and epidemiology statewide and electronic reporting of the data to DSHS.
 - Flexible infrastructure set-up to allow for regional varying needs
 - Ability to monitor circulating/emerging variants at regional/local levels
- Identified needs/skills and developed training to build a pipeline of trained public health workforce to meet future public health needs.
 - Developed 6 Genomic Epidemiology training modules in collaboration with UT Austin Center Biomedical Research Support
 - Conducted 6 live with on-demand access training sessions with a total of 426 attendees
 - 4 additional training modules are in development
