Note: Per Emerging and Acute Infectious Disease Unit Data Suppression policy, beginning with data published after June 2021, rates are not provided (-) when the Relative Standard Error exceeds 25% (n<16).

¹ Diseases listed reflect those that were notifiable in Texas based on Texas Administrative Code and where cases were reported in the current reporting year are greater than 9 for any one of the 15 most populous Texas counties as shown in the table above. Case counts are presumed to be underestimates of true disease incidence due to incomplete reporting. Data in this table may not match tables in articles in this publication that were written prior to completion of data review for this report, or other previously published materials.

² Population data is projected population updated July 18th, 2019 from Texas Demographic Center's Texas Populations Projections Program <https://demographics.texas.gov/data/tpepp/Projections/#srePop>

³ Due to the extenuating circumstances arising from the COVID-19 Pandemic, a considerable decline in the reported number of cases was noted across many notifiable conditions by the Texas Department of State Health Services for 2020. Thus, the reported case counts and associated rates may not accurately reflect the incidence of disease in the population.

⁴ Effective in 2016, *Haemophilus influenzae* type b infection, invasive was expanded to all invasive *Haemophilus influenzae* regardless of type.
