Note: Per Emerging and Acute Infectious Disease Unit Data Suppression policy, beginning with data published after September 2021, subgroup case counts of 1-4 and fatalities counts of 1-9 are not provided (-). Additional counts (--) are suppressed to prevent back-calculation of suppressed small counts.

¹ Event month for each condition and/or case may be month of onset, or month of diagnosis, report, or other event that approximates onset.

² Diseases listed reflect those that were notifiable in Texas based on Texas Administrative Code and where cases were reported in the current reporting year. Counts are by calendar month. Case counts are presumed to be underestimates of true disease incidence due to incomplete reporting. Data in this table may not match tables in articles in this publication that were written prior to completion of data review for this report, or other previously published materials.

³ Prion Disease is not included in this table.

⁴ Amebic Central Nervous System (CNS) infections include primary amebic meningoencephalitis (PAM) caused by *Naegleria fowleri* and CNS infections caused by other amebae.

⁵ Neglected tropical diseases reportable effective 2016 are ancylostomiasis (hookworm), ascariasis, echinococcosis, fascioliasis, paragonimiasis, and trichuriasis. Numbers previously published for 2016 for ancylostomiasis (hookworm), ascariasis, and trichuriasis have been corrected and include additional cases that were retrospectively identified.

⁶ Neglected tropical diseases reportable effective for 2016 are ancylostomiasis (hookworm), ascariasis, echinococcosis, fascioliasis, paragonimiasis, and trichuriasis.

⁷ Infant botulism cases are under 1 year of age by definition.

⁸ Effective in 2016, *Haemophilus influenzae* type b infection, invasive was expanded to all invasive *Haemophilus influenzae* regardless of type.

⁹ Influenza-associated pediatric mortality cases are under 18 years of age by definition.

¹⁰ Includes all cases of invasive *Neisseria meningitidis* including cases of meningitis, septicemia, and joint infections.

¹¹ The "Rickettsiosis, unspecified" condition was added to the Epi Case Criteria Guide in 2016 to capture rickettsial cases that could not be definitively classified as either flea-borne typhus or spotted fever rickettsiosis.

¹² These arbovirus counts include both neuroinvasive and non-neuroinvasive cases.

¹³ Vancomycin-intermediate resistant *Staphylococcus aureus* (VISA)--*Staphylococcus aureus* with a vancomycin minimum inhibitory concentration (MIC) of 4 µg/mL through 8 µg/mL.
