Annual Summary of Morbidity Reports for 1952

The annual summary of notifiable diseases for 1952 in several instances reflects the changes in the revised morbidity reporting system introduced in midyear. For the first six months of the year poliomyelitis was reported as total cases only. The classified cases of poliomyelitis in the 1952 summary, therefore, represent only cases reported for the last six months. All of the cases for the entire year including the classified cases are tabulated by county under Total Poliomyelitis. Infectious and serum hepatitis and Q fever were added to the list of reportable diseases in midyear while streptococcal sore throat, including scarlet fever replaced scarlet fever on the report.

The *syphilis* tabulation lists all **forms** of the disease reported for the year, including survey reports.
