2007 - 2008 Texas Influenza Surveillance Information

Influenza Surveillance Report for MMWR Week 51

The influenza (flu) activity level for Texas for the week ending December 22, 2007 is "regional." Regional activity indicates that two or more but less than half of the regions in the state are experiencing an increase in influenza-like illness (ILI) and have recent culture-confirmed influenza.

Reports were received from all 11 Health Service Regions for week 51. HSRs 2/3, 7, and 11 reported an increase in flu activity from the previous week. For a map of Health Service Regions, please visit the following website:

<http://www.dshs.state.tx.us/regions/state.shtm>

During week 51, seven hospital laboratories throughout Texas and the Texas Department of State Health Services Laboratory reported conducting a total of 439 influenza tests (antigen culture, and PCR) to the National Respiratory and Enteric Virus Surveillance System (NREVSS) sponsored by the Centers for Disease Control and Prevention (CDC). Fifteen antigen detection tests positive for influenza A/untyped were reported from Bell, Bexar, and Harris counties. One PCR test positive for influenza A/untyped was reported from Bell County. On additional PCR test positive for influenza B was reported by Tarrant County. A total of 37 reports of culture-confirmed influenza were received from NREVSS and other sources for the following counties:

Influenza A/H1	Influenza A/H3	Influenza A/untyped	Influenza B
El Paso County (3)	Bexar County (2)	Bell County (3)	Dallas County
Hemphill County (2)	Galveston County (2)	Brazos County	El Paso County (4)
Jim Hogg County	Kleberg County	Dallas County	Harris County
	Nueces County	Harris County (14)	

Additional positive results from point-of-care rapid flu tests were reported by providers throughout the state (see Texas map below).

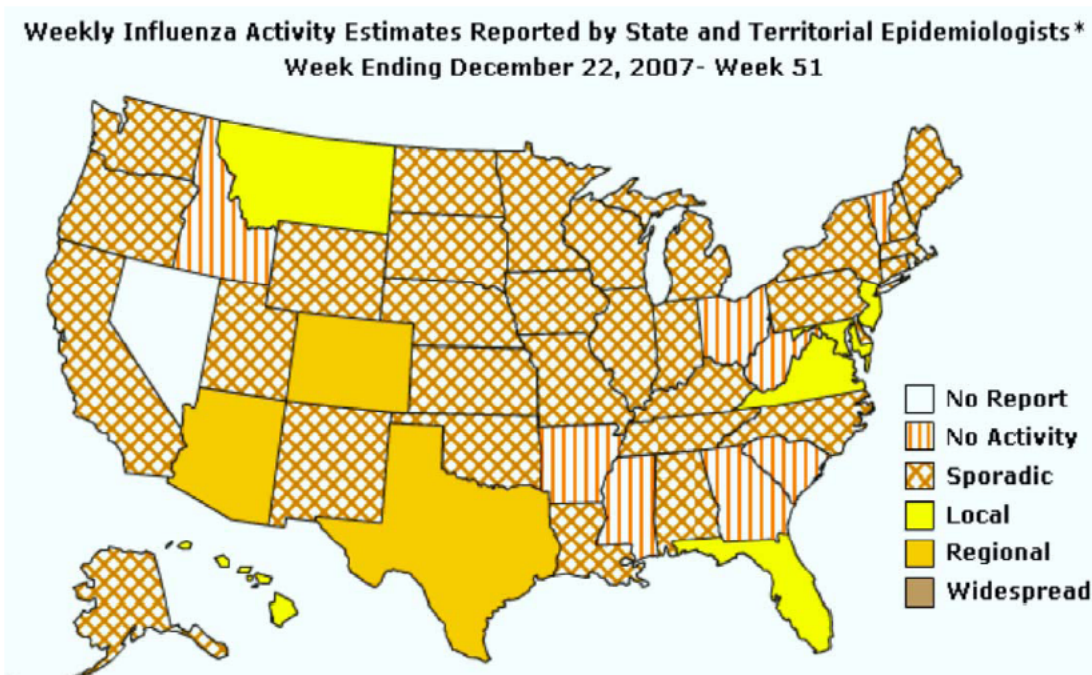

No institutional outbreaks or school closures were reported for week 51.

Forty-nine sentinel providers reported data to the U.S. Influenza Sentinel Provider Surveillance System (SPSN) on patients with influenza-like illness (ILI) and total patients seen for reason during week 51. Forty-eight providers reported seeing patients during week 51; of those, 34 (70.8%) providers reported seeing at least one patient with ILI. Of all patient visits during this week, 4.42% were due to ILI. The ILI baseline for the West South Central Region (Arkansas, Louisiana, Oklahoma, and Texas) of the United States is 4.3% for the 2007-2008 season. The baseline is the mean percentage of patient visits for ILI during non-influenza weeks for the previous three seasons plus two standard deviations.

Week	# Reporting	Age 0-4	Age 5-24	Age 25-64	Age over 64	Total ILI	Total Patients	% ILI
2007-40	84	256	163	151	49	619	21410	2.89
2007-41	88	264	255	207	58	784	25255	3.10
2007-42	86	274	270	261	50	855	25776	3.32
2007-43	85	368	290	208	47	913	26428	3.45
2007-44	95	391	276	206	55	928	28213	3.29
2007-45	87	411	314	243	39	1007	25665	3.92
2007-46	79	420	299	215	65	999	24540	4.07
2007-47	90	470	302	272	73	1117	22380	4.99
2007-48	83	490	284	299	74	1147	25696	4.46
2007-49	82	221	275	162	16	674	20109	3.35
2007-50	75	236	244	126	16	622	17686	3.52
2007-51	49	149	183	183	26	541	12252	4.42

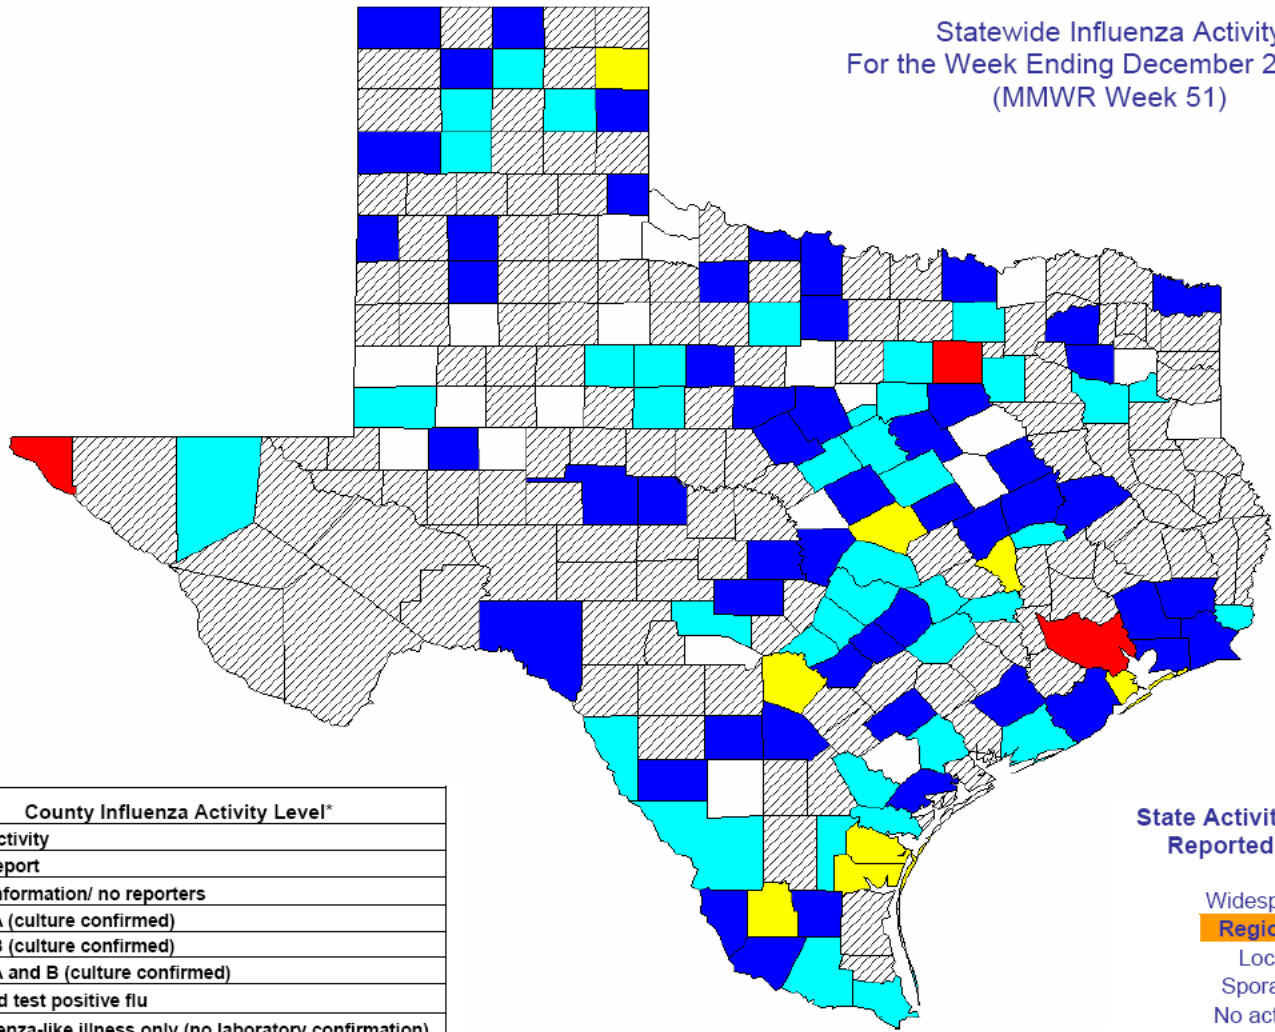

The map showing influenza activity in the United States for MMWR week 51 is displayed below. The current U.S. flu weekly report may be found at: <http://www.cdc.gov/flu/weekly/fluactivity.htm>
